Explaining Relationships: Understanding the Main Ideas

Look at the following diagram. If the outermost circle represents a very large group of organisms, or a kingdom, what classification group does each of the inner circles represent? Put your answers on the lines provided.

Using the diagram and the information in Section 1-2, answer the following questions:

1. Would you find more different organisms in a class or a family?

2. Which classification group has the largest number of different organisms?

3. Which classification group has only one type of organism?

4. The most closely related different organisms would probably belong to the same

5. List the classification groups, in order, from largest to smallest.
