

SAVING AS A TEMPLATE

You can save a project as a template. You can then share your template with other Share users. Users can make new projects using a template but cannot save changes to a template.

Make a site in Share. Add rectangles, images, text, and buttons to the page. Lock any objects you do not want to change in the template file.

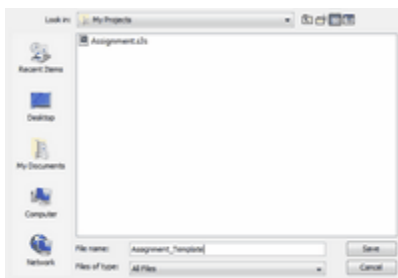

Go to the **File** menu and choose **Save As Template**.

You will see the Save Site As dialog.

Locate the place where you want to save the template.

Type a name for the template file in the Save As field.

Click the **Save** button.

The template is saved.

When users open your template they have to save the file with a new name to save changes.
